Editorial Review

From Publishers Weekly

With this complex, thoughtful sequel to his highly praised *Revelation Space* (2001), British author Reynolds confirms his place among the leaders of the hard-science space-opera renaissance. Spreading from star to star, humanity has split into different, competing factions. Late in the 26th century, the group-mind Conjoiners are defeating their main rivals, the Demarchists. Unfortunately, the Conjoiners' space exploration has attracted the notice of an ancient swarm of machines that calls itself the Inhibitors and that exists to destroy all biological intelligence. The Conjoiners don't believe they can fight this new foe, so they intend to run away and let the Inhibitors wipe out the other human tribes. One Conjoiner warrior, the centuries-old Clavain, rebels against this heartless tactic, but he must negotiate with a fragmented, distrustful mob of possible allies while pursued by his former cohorts. The novel forces readers to process an outrageous amount of information—but that's only fair, since the characters are challenged to do the same. As they extend themselves outward, they also have a chance to gain more understanding of themselves as human beings and more ability to interact meaningfully. It's rare to find a writer with sufficient nerve and stamina to write novels that are big enough to justify using words like "revelation" and "redemption." Reynolds pulls it off.

From [Booklist](#)

Reynolds' latest is a large, sprawling tale of war, politics, ideology (including religion), and alien invasion. It starts with the return to base, after 200 years, of an exploration ship filled with corpses. Its central characters are the investigators trying to find what or who killed the ship's occupants: A human (using the term loosely) enemy? Aliens? A nanotech plague? As the investigation proceeds, Reynolds introduces a galaxy's worth of technology and politics, the latter including the faction fight that gives the book its title. Like Reynolds' previous books, this one can be considered a technothriller set in the future, with technology extrapolated from the current states of biotech and artificial intelligence. Human nature is not envisioned as having changed much at all, however, no matter how much intelligence may be augmented. Despite a quite intricate plot, skilled narrative technique and well-developed characters make this a novel most readers will find absorbing and comprehensible. *Roland Green*
