## **Distance Sampling: Methods and Applications (Methods in Statistical Ecology)** By S. T. Buckland, E.A. Rexstad, T.A. Marques, C.S. Oedekoven

In this book, the authors cover the basic methods and advances within distance sampling that are most valuable to practitioners and in ecology more broadly. This is the fourth book dedicated to distance sampling. In the decade since the last book published, there have been a number of new developments. The intervening years have also shown which advances are of most use. This self-contained book covers topics from the previous publications, while also including recent developments in method, software and application.

Distance sampling refers to a suite of methods, including line and point transect sampling, in which animal density or abundance is estimated from a sample of distances to detected individuals. The book illustrates these methods through case studies; data sets and computer code are supplied to readers through the book's accompanying website. Some of the case studies use the software Distance, while others use R code. The book is in three parts. The first part addresses basic methods, the design of surveys, distance sampling experiments, field methods and data issues. The second part develops a range of modelling approaches for distance sampling data. The third part describes variations in the basic method; discusses special issues that arise when sampling different taxa (songbirds, seabirds, cetaceans, primates, ungulates, butterflies, and plants); considers advances to deal with failures of the key assumptions; and provides a check-list for those conducting surveys.

## **Editorial Review**

### **Review**

“This new volume by Dr. Buckland and his colleagues at the University of St. Andrews serves as both an introduction to distance sampling for people new to the field as well as a summary of recent developments. ... I recommend the book as an excellent entry into this fascinating area of estimation and research. The R code alone is worth the purchase price.” (Mark Miller, BTO British Trust for Ornithology, [bto.org](http://bto.org), January, 2016)

### **From the Back Cover**

In this book, the authors cover the basic methods and advances within distance sampling that are most valuable to practitioners and in ecology more broadly. This is the fourth book dedicated to distance sampling. In the decade since the last book published, there have been a number of new developments. The intervening years have also shown which advances are of most use. This self-contained book covers topics from the previous publications, while also including recent developments in method, software and application.

## **Users Review**

### **From reader reviews:**

#### **Marjorie Batchelder:**

Do you considered one of people who can't read pleasant if the sentence chained inside straightway, hold on guys that aren't like that. This Distance Sampling: Methods and Applications (Methods in Statistical Ecology) book is readable by means of you who hate the perfect word style. You will find the details here are arrange for enjoyable reading through experience without leaving actually decrease the knowledge that want to give to you. The writer associated with Distance Sampling: Methods and Applications (Methods in Statistical Ecology) content conveys thinking easily to understand by most people. The printed and e-book are not different in the written content but it just different in the form of it. So , do you nonetheless thinking Distance Sampling: Methods and Applications (Methods in Statistical Ecology) is not loveable to be your top

collection reading book?

**Geraldine Dube:**

Nowadays reading books are more than want or need but also get a life style. This reading habit give you lot of advantages. Associate programs you got of course the knowledge the particular information inside the book that will improve your knowledge and information. The information you get based on what kind of book you read, if you want attract knowledge just go with education and learning books but if you want really feel happy read one together with theme for entertaining including comic or novel. The Distance Sampling: Methods and Applications (Methods in Statistical Ecology) is kind of e-book which is giving the reader unforeseen experience.

**Logan Merritt:**

The actual book Distance Sampling: Methods and Applications (Methods in Statistical Ecology) will bring you to definitely the new experience of reading a book. The author style to spell out the idea is very unique. In case you try to find new book you just read, this book very suitable to you. The book Distance Sampling: Methods and Applications (Methods in Statistical Ecology) is much recommended to you to study. You can also get the e-book from the official web site, so you can quicker to read the book.

**Donna Moore:**

You can obtain this Distance Sampling: Methods and Applications (Methods in Statistical Ecology) by look at the bookstore or Mall. Simply viewing or reviewing it may to be your solve challenge if you get difficulties for the knowledge. Kinds of this reserve are various. Not only by means of written or printed but additionally can you enjoy this book by e-book. In the modern era including now, you just looking of your mobile phone and searching what your problem. Right now, choose your ways to get more information about your book. It is most important to arrange you to ultimately make your knowledge are still update. Let's try to choose proper ways for you.
