Embryology: An Illustrated Colour Text, 2e By Barry Mitchell BSc MSc PhD FIBMS FIBiol, Ram Sharma BSc MSc PhD

EMBRYOLOGY provides a concise and highly illustrated text, which confines its descriptions to those that are relevant for modern undergraduate and postgraduate medical courses, and similar courses in other related disciplines. An appreciation of embryology is essential to understand topological relationships in gross anatomy and to explain many congenital anomalies. Each chapter is supplemented by clinical point 'boxes' and by key revision points.

- Text in concise Illustrated Colour Text style, so core information on embryology can be quickly recognised and digested.
- Clear full colour diagrams and pictures make the embryological concepts clear and easily assimilated.
- Clinical boxes highlight essential points of importance to medical students.

Editorial Review

Review

For me embryology is just a subsection of anatomy, so this book is perfect: easy to dip into with the main stages of development split into distinct chapters, a far cry from other thick embryology texts that are both consuming in terms of both time and money.

Clinical and summary boxes can be found in each chapter, and are ideal for last minute cramming, and the glossary is well suited to the MCQ nature of medical exams. I would recommend this book to anyone who views embryology as a compulsory part of his or her anatomy course. - *Medical Student, University of Cambridge*

About the Author

Barry Mitchell, BSc, MSc, PhD, FIBiol, Senior Lecturer/Director, Centre for Learning Anatomical Sciences, Southampton University Medical School, UK; and Ram Sharma, Lecturer in Anatomical Sciences, Southampton University Medical School, UK

Users Review

From reader reviews:

Ralph Garibay:
