Awarded The British Medical Association Student Textbook Award 2009, this short and accessible book comes with an interactive CD of heart sounds recorded from actual patients using the latest digital audio technology. Cardiac auscultation is one of the most difficult clinical skills to acquire and competence in this area is extremely variable. With the CD the user can listen to a recording and either eliminate or enhance the different components until they are confident that they have correctly identified the sounds in all phases of the cardiac cycle. This Second Edition uses the latest software and includes new features, such as the ability to slow the heart sounds down without altering their pitch. The layout of the CD has been improved to make it quicker to access. New questions and answers in both the book and the CD allow readers to monitor their knowledge and progress. Editorial Review

Review

"This is an excellent combination of book and CD-Rom which covers the difficult to teach topic of cardiac auscultation. The recordings allow students to listen to real recordings of heart sounds in combination with the text and mini-tutorials on the CD. The CD is easy to use and the animated diagrams of the cardiac cycle are very clear."
