Where Reincarnation and Biology Intersect By Ian Stevenson M.D.

Children who claim to remember a previous life have been found in many parts of the world, particularly in the Buddhist and Hindu countries of South Asia, among the Shiite peoples of Lebanon and Turkey, the tribes of West Africa, and the American northwest. Stevenson has collected over 2,600 reported cases of past-life memories of which 65 detailed reports have been published. Specific information from the children's memories has been collected and matched with the data of their claimed former identity, family, residence, and manner of death. Birthmarks or other physiological manifestations have been found to relate to experiences of the remembered past life, particularly violent death. Writing as a specialist in psychiatry and as a world-renowned scientific investigator of reported paranormal events, Stevenson asks us to suspend our Western tendencies to disbelief in reincarnation and consider the reality of the burgeoning record of cases now available. This book summarizes Stevenson's findings which are presented in full in the multi-volume work entitled *Reincarnation and Biology: A Contribution to the Etiology of Birthmarks and Birth Defects*, also published by Praeger.

"Dr. Ian Stevenson, a distinguished scholar and professor of psychiatry at the University of Virginia has written a highly intriguing book about his experiences around the world that support the idea that birth marks and other skin lesions and abnormalities may provide evidence of cutaneous injuries sustained in a previous life, thus supporting the notion of reincarnation."-Integrative Physiological and Behavioral Science
